Manufacturing Innovation. Together.

```
' This is a very simple rule that uses iLogic snippets to find the appropriate instance
'      in an iPart table based on parameters we choose
' In the case, we're looking up the right part based on its size (OD) and thickness
i = iPart.FindRow("ASME Dished Head:1", "Size", "=", TANK_OD, "Thickness", "=", .25 in)
i = iPart.FindRow("ASME Dished Head:2", "Size", "=", TANK_OD, "Thickness", "=", .25 in)
```
